School the Best Environment for Solving National Obesity Epidemic

by Michael Hopps

Obesity is going in the wrong direction. Since the World Health Organization began keeping records on global obesity in 1980, not a single country has gotten thinner.1

The habits that augur a lifetime of obesity—and the maladies that can follow that condition, such as heart disease, type-2 diabetes, osteoarthritis, sleep apnea, and several types of cancer2—begin in childhood. In 1980, only 7 percent of American children ages 6 to 11 and 5 percent of U.S. adolescents (12- to 19-year-olds) were obese.3 By 2012 those numbers had ballooned to 18 percent of 6- to 11-year-olds and 21 percent of adolescents. More than one of every three American children are overweight4 or obese,5 according to the Centers for Disease Control and Prevention (CDC).6, 7

The United States, the world’s richest nation, is among its most overweight.8 But those Americans

In Detroit, Mich., a city that has suffered severe economic decline, bankruptcy, crime, and urban decay, some high schools are now requiring students to address these problems and take steps to improve their community before they can graduate.

During the 2013–14 school year, seniors at Edwin C. Denby High School in northeast Detroit were the school’s first students to embark on a series of efforts to transform their neighborhood, which faces such challenges as crime, poverty, and abandoned buildings. This program, in partnership with the Detroit Future City (DFC) organization,1 requires students to design capstone projects and work with school staff, community members, and DFC representatives to put them into action.

Denby High School’s newest graduation policy has quickly evolved into a successful model for both academic achievement and civic engagement. And the Denby–DFC partnership has proven to be a major force for aiding neighborhood revitalization.

Denby seniors cleaned up 16 blocks around the school, boarded up 11 vacant homes, mowed lawns, created tire gardens, put in street lights, and began to clean a six-acre playing field next to the school to change it into a community space. With assistance from DFC members, the students petitioned the city to demolish the most blighted apartment building in the neighborhood, and they are now transforming the land into a botanical laboratory. These are just a few
Too Scared to Run: Many factors contribute to obesity in low-income neighborhoods. One of those less publicized is fear—of assault while jogging alone.

Simply put, children who are born, grow up, live, work, and grow old in low-income, inner city environments are more likely to be obese than children from affluent backgrounds.

School Is Where Habits Can Change
As explained by the CDC, excess weight and obesity result from caloric imbalance—that is, not enough calories are expended to balance the amount consumed. Though various genetic, behavioral, and environmental circumstances can contribute to overweight and obesity, the two key protective factors are healthy diet and proper exercise. And schools—even those in low-income, inner city communities that lack open real estate—are the best place to instill good diets and exercise.

"Ninety-five percent of American children are enrolled in schools for 13 years of their lives for at least 6 hours a day," says Allison Nihiser, a health scientist with CDC, who works on obesity prevention in the ways that Denby students have worked to improve their neighborhood, and further plans are in the works for this year's senior class.

Integrating Youth Community Activism With School
The DFC Strategic Framework Plan calls for integrating the "engagement of youth who hold a stake in the present and future of Detroit," which dovetails with Denby's requirements for students' senior capstone portfolio projects.

Through the DFC–Denby partnership, the city's renewal has been directly tied to the Denby high school curriculum. DFC works with the school to integrate its framework with major subjects in the school curriculum. One goal of the capstone experience for last year's Denby seniors was to demonstrate mastery of high-level skills across four core competencies—inquiry, textual analysis, research, and creative expression.

The DFC Strategic Framework Plan calls for integrating the "engagement of youth who hold a stake in the present and future of Detroit," which dovetails with Denby's requirements for students' senior capstone portfolio projects.

Through the DFC–Denby partnership, the city's renewal has been directly tied to the Denby high school curriculum. DFC works with the school to integrate its framework with major subjects in the school curriculum. One goal of the capstone experience for last year's Denby seniors was to demonstrate mastery of high-level skills across four core competencies—inquiry, textual analysis, research, and creative expression.

The Glossary of Education Reform calls a capstone project "a multifaceted assignment that serves as a culminating academic and intellectual experience for students, typically during their final year of high school or middle school, or at the end of an academic program or learning-pathway experience." Capstone experiences culminate in a thesis that students defend before graduation, providing "a well-defined opportunity for students to refine high-level skills and to synthesize, integrate, and apply the knowledge gained throughout their training."

Denby's capstone model is unique in its adoption of the DFC Strategic Framework Plan as the basis for students' choice of topics for their long-term assignments. The model integrates students' proposed solutions for issues, such as community safety and stability, within the primary subject areas—math, science, English, and social studies—of
school setting. "This is where we can help students learn about and practice healthy behaviors."

Dr. Sarah Lee, team leader in the School Health Branch of CDC's National Center for Chronic Disease Prevention and Health Promotion, notes the following strategies used by physical education teachers lacking space or facilities:

- In classrooms, P.E. teachers often put tennis balls or other similar material on desk legs to easily slide desks out of the way and conduct physical education in the classrooms themselves.
- They often set up joint-use agreements with community organizations and take the children to other nonschool facilities for exercise.
- For outdoor physical education, some gym teachers will use blacktop surfaces—empty lots or nearby spaces that might have courts, small fields, and the like—when they are close enough to the school.

Nihiser also emphasizes before- and after-school opportunities. "Sometimes kids are dropped off really early," she stresses. Seeking opportunities for physical activity, the CDC will inquire, "Is there equipment they can share?" Noting that not every child is an Olympic athlete, Nihiser says that a growing number of U.S. public schools "are offering noncompetitive before- and after-school activities—walking clubs, running clubs, dancing clubs."

The federal government requires the nation's school districts participating in the school meals program to develop wellness policies that include mandates for physical activity and nutrition education, promotion, and standards. Nihiser notes that districts may also leverage the policies to include language on violence prevention.

**Chicago, Philadelphia Cities With Model Policies**

Nihiser cites Forum city Chicago, Ill., as one of the public school systems with a comprehensive wellness policy. The *Chicago Public Schools Policy Manual*, recognizing "the relationship... between academic achievement and student health and wellness," sanctions a sequential K–12 nutrition education curriculum and physical education that engages all students in moderate to vigorous activity during two thirds of all gym class time.

In 2010, Forum city Philadelphia, Pa., launched Get Healthy Philly, an initiative combining the resources of local government, community-based organizations, academia, and the private sector to address obesity reduction and smoking cessation.

"We've tried to incorporate brief physical activity into Denby's core curriculum."

For example, in English classes, students were required to read the DFC Strategic Framework Plan and study the sociological and historical underpinnings of urban planning in Detroit.

The Denby–DFC Senior Portfolio Project originated with staff conversations about how to "actively engage students in their own learning," explained Denby High School resource and curriculum specialist Jay Haffner.

Although staff supported aligning DFC's goals with the school's capstone projects, Haffner said that the students were initially very resistant to the idea of being required to complete these complex projects before they could graduate, Haffner said. "Torches and pitchforks were gathered," he remembered with humor. "There was griping and moaning."

Yet students' attitudes changed quickly once they began talking to then—social studies teacher Jonathan Hui. They realized that their projects could both serve their needs and help their community.

**Student Projects Contribute to a Safer Detroit**

"We wanted to equip our students with making a difference," Hui said, and began to ask the students what community issues concerned them most. Safety, not surprisingly, was number one.

While Haffner assumed the responsibility for implementing the curriculum component, Hui reached out to the larger community and brokered other partnerships, in addition to the DFC, with more than 20 other organizations.

Hui said that, once the students realized adults in their community were listening to them, they took on the mission of neighborhood revitalization and "ran with it." The group of seniors highlighted community problems and solutions, by researching blight, poverty, hunger, unemployment, education, and other topics.

Through the DFC partnership, the students also received supplemental materials, gained community mentors, and received continuing feedback on their capstone efforts.

According to capstone project requirements, students must develop a list of "actionable ideas" and present and defend their proposed solutions before a panel of judges. Hui said that as students generated ideas for community revitalization, while engaging both their neighbors and the DFC team in their efforts, they were able to create "an actionable, sustainable model to mitigate youth violence."
every school day,” says Dr. Giridhar Mallya, director of policy and planning for the Philadelphia Department of Public Health, which created the initiative. “Not every kid may have gym class, but every kid can move. So the schools have implemented movement breaks.”

He explains: “As the kids are coming into the classroom, teachers are leading kids in simple but fun exercises such as jumping jacks or running in place. The teachers also use this as a tool to get the kids focused.”

Though the nature of these movement breaks varies from school to school, every public school in Philadelphia has a wellness council, made up of teachers, staff, students, and parents who ensure that wellness policies are put into place. Each school has a designated School Wellness Champion. Though the policies, too, vary, some standards are that soda isn’t sold in school, that candy bars aren’t used for fundraisers, and that there are guidelines for youths on nightly television and computer time.

As part of Get Healthy Philly, the city has expanded the infrastructure for walking and biking throughout the city and expanded after-school activities in recreation centers—"a safe haven for kids," notes Mallya.

With some of these practices already in place, the Philadelphia School District saw about a 5 percent reduction in childhood obesity for the 4-year period of 2006–07 through 2009–10.16

The awards will aid schools in hiring qualified mental health professionals, with the goal of expanding the range, availability, quantity, and quality of counseling services. Research indicates that having adequate counseling services can help reduce the number of disciplinary referrals in schools, improve student attendance and academic performance, and enhance students' social skills. Parents of participating students will have input in the design and implementation of counseling services supported by these grants.

As reported by the Education Department's Prevention News Digest, the states (with the number of school districts in each and the amount of funds provided in parentheses) are as follows: Alaska (2, $470,257), Arizona (1, $380,313), California (9, $3,417,968), Colorado (1, $363,112), Connecticut (1, $396,673), Idaho (1, $270,968), Indiana (1, $396,436), Kansas (1, $361,057), Kentucky (4, $1,463,682), Massachusetts (1, $366,605), Nebraska (1, $397,016), New Hampshire (1, $395,469), New York (5, $1,910,716), North Carolina (2, $727,263), Oklahoma (4, $1,257,244), Oregon (1, $326,291), Pennsylvania (1, $396,000), South Carolina (1, $306,436), Texas (2, $772,416), Wisconsin (1, $394,169).

Training Opportunities

G.R.E.A.T. Trainings for Officers and for Families on Tap

Gang Resistance Education and Training (G.R.E.A.T.) Officer Training is a classroom certification course teaching the fundamental aspects of G.R.E.A.T.—a school-based life-skills competency program taught by uniformed police officers. G.R.E.A.T.'s primary goal is violence prevention, especially through resistance to gang activity. This sequential course, hosted by the Institute for Intergovernmental Research, presents an elementary and middle school curricula for the school year and summer. Upcoming trainings are Oct. 6–15 in La Crosse, Wis.; Nov. 3–12 in New Orleans, La.; and Nov. 10–19 in Newark, N.J. Register here for a course near you.

Gang Resistance Education and Training (G.R.E.A.T.) Families Training is designed to show active G.R.E.A.T. instructors how to effectively and consistently teach the G.R.E.A.T. families curriculum. The 2-day classroom course models each curriculum session, provides strategies for interacting with families, and gives an overview of other resources for families, and gives an overview of other resources for

- Learning to recognize the signs of potential trafficking among minors is the first step in identifying victims.
- Schools can help end the physical, emotional, and mental trauma suffered by young victims of sex trafficking.
- School districts and state departments of education are encouraged to train staff and establish protocols for recognizing and responding to trafficking.

OJJDP Cautions Healthcare Sector to Increase Its Capability to Recognize and Develop Solutions to Trafficking Crimes

A new Office of Juvenile Justice and Delinquency Prevention guide for the healthcare sector highlights the frequent contact of healthcare professionals with youths who are victims of sex trafficking or at risk of involvement. Confronting Commercial Sexual Exploitation and Sex Trafficking of Minors aims to reduce barriers to identifying victims and offers helpful strategies for professionals who see children and adolescents for prevention and treatment of injury, illness, and disease.

OJJDP Releases Handbook for Law Enforcement Response to Child Abuse

This step-by-step guide—Law Enforcement Response to Child Abuse: A Portable Guide to Investigating Child Abuse—is a series of responses and protocols that emphasize the central role of law enforcement in child abuse cases and the need for a multidisciplinary team approach and "speaking a common language." The handbook provides information to help law enforcement personnel ensure consistency in child abuse investigations, understand their role on a multidisciplinary child protection team during a child abuse case, and establish procedures and protocols for working with other professionals to meet the needs of abused children.

DEA Has New Drug Education Web Site

The Drug Enforcement Administration launched its new GetSmartAboutDrugs.com, a drug education Web site for parents, educators, and caregivers. The appealing site redesign allows easier navigation, and its updated content includes useful drug information and resources, videos, fact sheets, and short informative articles.

On 40th Anniversary of Juvenile Protection Law, Listenbee Details Progress

On the 40th anniversary of the signing of the Juvenile Justice and Delinquency Prevention (JJDP) Act into law, OJJDP Administrator Robert L. Listenbee reviews the law's impact on juvenile justice in a new blog post. Noting that "violent crime arrest rates for youth
Webinar Offered on Alcohol and Evidentiary Issues
Research has shown that alcohol use—especially excess use—is a risk factor for perpetrating youth violence. Depending on state laws and the offense, underage drinking offenses may be referred to numerous courts, including juvenile court, traffic court, criminal court, or family court. "A Judicial Conversation on Emerging Evidentiary Issues and Alcohol," a Webinar on Nov. 13, beginning at 3 p.m. EST, discusses how courts should regard this topic. It covers electronic identification scanners, portable breath test devices, and passive alcohol sensing devices and whether they are admissible in court, while also exploring evidentiary issues that courts are finding on underage drinking. Register here.

Registration Open for National Mentoring Summit
The National Mentoring Summit 2015 will be hosted by the National Mentoring Partnership Jan. 28–30, 2015 in Washington, D.C. Summit workshop sessions will explore how mentoring can help youths achieve positive outcomes. This event is intended for mentoring practitioners, researchers, corporate partners, government and civic leaders, youth-serving organizations, and MENTOR’s network of affiliate Mentoring Partnerships. Early registration is now open, with early bird rates until Oct. 3. Register here.

Seven in Eight Detroit Students Affected by Violence
In Detroit, Mich., 87 percent of 1,301 Detroit Public Schools students surveyed in the past year said they knew someone who had been killed, disabled, or wounded by gun violence, according to the Detroit Youth Violence Prevention Initiative.

Update
Murder Rate Down Dramatically in Camden
Forum city Camden, N.J., is one of the nation’s most crime-ridden and violent cities of its size. As Dave Marsden reported in the National Forum on Youth Violence Prevention News in January, the city tried a bold experiment in 2013, replacing its entire police force with another run by Camden County. Actually, many of the old officers reinterviewed for their old jobs and got them back. Since a tenfold increase in police–citizen contact, crime and violent crime have plummeted. As reported in the New York Times, the number of summer murders in Camden fell from 22 in 2012 to 6 in 2014. National Public Radio also reported on the phenomenon.

Other Resources
OJJDP's Beyond Detention Bulletins Available in Convenient Formats
The Northwestern Juvenile Project is the first large-scale longitudinal study of drug, alcohol, and psychiatric disorders in a diverse sample of juvenile detainees. These findings, detailed in bulletins from the OJJDP Beyond Detention series, are now available in EPUB and MOBI formats. The series covers suicidal thoughts and behaviors, posttraumatic stress disorder, and trauma among juvenile detainees; functional impairment after detention; psychiatric disorders in youth processed in juvenile or adult court; barriers to mental health services; violent death among delinquent youth; and psychiatric disorders in youth after detention.
