EDUCATORS ARE CRITICAL PARTNERS IN MAKING A DIFFERENCE IN THE LIVES OF CHILDREN OF INCARCERATED PARENTS

September 24, 2015
2:00 – 3:30 PM EDT

Federal Interagency Reentry Council's Subcommittee on Children of Incarcerated Parents

American Institutes for Research
AGENDA

- Welcome and Housekeeping
- Introductions and Poll
- Overview — Ann Adalist-Estrin
- Implementing a Whole School Approach — David Osher
- Hearing from an Educator at SEL/Trauma Informed School — Dwight Davis
- Dream Academy Youth with Incarcerated Parent — Kendall Tidwell
- Q&A Session
- Wrap-Up
ANN ADALIST-ESTRIN
DIRECTOR
NATIONAL RESOURCE CENTER ON CHILDREN AND FAMILIES OF THE INCARCERATED
RUTGERS UNIVERSITY
RESPONDING TO THE NEEDS OF CHILDREN AND FAMILIES OF THE INCARCERATED IN SCHOOLS

Ann Adalist-Estrin, M.S., Director
National Resource Center on Children and Families of the Incarcerated
Rutgers University | Camden, NJ
QUICK CHECK: ASSUMPTIONS
BELIEFS AND ATTITUDES

➢ The best thing that could happen to the children of incarcerated parents is _____________________________

➢ The worst thing that could happen to children of incarcerated parents is _____________________________
GUIDING PRINCIPLE # 1

Be Self Reflective

➢ What lenses are you wearing when you think about this topic or engage with children and families of the incarcerated?

➢ Which life experiences color and shade your thoughts, feelings, and opinions?
HOW WE KNOW WHAT WE KNOW

Three elements of understanding children with incarcerated parents.

- **Data**
  
  Review of administrative data and collection of demographics

- **Experiences**
  
  Anecdotal, programmatic and clinical chronicles and empirical studies

- **Meaning Making**
  
  Interpretations and judgments
Including jails, estimates indicate that as many as 2.7 million children have a parent behind bars.

Over 50% of children who have an incarcerated parent are age 9 or younger.
CAREGIVERS

Caregiver for Children During Parent's Incarceration

HOW WE KNOW WHAT WE KNOW: EXPERIENCES

➢ All Alone in the World, Nell Bernstein

➢ Parental Incarceration and the Family, Joyce Arditti

➢ Disrupted Childhood: Children of Women in Prison, Jane Siegel

➢ Doing Time on the Outside, Donald Braman
Adverse Childhood Experiences Study

Growing up experiencing any of the following conditions in the household prior to age 18 led to many negative health and behavioral outcomes later in life.

- Recurrent physical or emotional abuse or neglect
- Sexual abuse
- An alcohol and/or drug abuser in the household
- An incarcerated household member
- Someone who is chronically depressed, mentally ill, institutionalized, or suicidal
- Mother is treated violently
- One or no parents

The ACE Study is an ongoing collaboration between the Centers for Disease Control and Prevention and Kaiser Permanente. Led by Co-principal Investigators Robert F. Anda, MD, and Vincent J. Felitti, MD.
TRAUMA: IMPACT ON BRAIN DEVELOPMENT RELATED TO CORTISOL REGULATION

- Impulse Control – inability to stop oneself
- Cause and Effect – limited capacity to anticipate consequences
- Predictability – lack of social “cueing”
- Emotional Regulation – extreme difficulty delaying gratification
- Reciprocal Engagement – inability to tolerate conflict with or in others

Leading to poor school performance, increased drop out rates, gang involvement, early pregnancies and drug use, abuse and addiction.
TRAUMA IN CHILDREN: EXPANDING THE DEFINITION

- The Child Witness to Violence Project at Boston University School of Medicine defines child trauma as events that activate high levels of fear for one's life or someone closely connected.
- According to Victor Carrion at Stamford University young children have a distorted and non-permanent sense of life and death and porous boundaries between themselves and parent.
- Therefore the absence or unavailability of a parent or primary attachment figure is emotionally equivalent to life threatening.
The presence of parents or other adult attachment figures raises dopamine levels and lowers the dangerous levels of cortisol.

Dozier, 2005.
Persistent fear and anxiety can affect young children’s learning and development and change brain architecture.

Scientists now know that chronic, unrelenting stress in early childhood, caused by abrupt separation from caregivers, extreme poverty, or parental depression, for example, can be toxic to the developing brain in the same way as repeated abuse and witnessing violence changes brain architecture.
Meaning Making

The ACE Study through a lens of child maltreatment vs. adult risk factors

“So when we talk about a child losing a parent to incarceration and we are interpreting the ACES literature only through a child maltreatment lens, the meaning that gets made (intentionally or not) is that children of incarcerated parents are maltreated children, harmed by their parents and thus better off without them. If however, the parents who are in prison or jail are seen as potential supports for these children, as buffers from the toxicity of the stress, then a different meaning is made of the loss. It becomes more profound and less dismissible.”
GUIDING PRINCIPLE # 2

When reading research always ask yourself why would this be true?

- Murray’s Cambridge Study (2005) indicates that children separated from parents because of incarceration exhibited more antisocial behavior than children separated for other reasons.
- Murray, Farrington, Sekol and Olsen found that children of incarcerated parents were twice as likely to exhibit antisocial behaviors and other mental health problems as their peers. (2009)
CHILDREN OF THE INCARCERATED? OR JUST CHILDREN?

Children of the Incarcerated like all humans are “all at once like all others, like some others and like no others.”

- Emmanuel Lartey
GUIDING PRINCIPLE # 3

CHILDREN OF INCARCERATED PARENTS AND THEIR FAMILIES ARE NOT ONE MONOLITHIC GROUP.

Honor the Themes and Variations
COMBINED SOURCES POINT TO UNIQUE TOXIC STRESS OF PARENTAL INCARCERATION

- Stigma and Shame
- Conspiracy of Silence and isolation
- Changes in residence, family structure
- Difficulty maintaining a relationship with the incarcerated parent
- Fear and worry about parents and caregivers
- Loyalty Conflicts
- Guilt and self blame
- Trauma from the sudden absence of a parent or the events leading up to it
- Lack of relevant support
- School behavior and performance problems
WHAT CAUSES THE SHAME AND STIGMA?

The meaning that is made....children are ashamed of their parents crime or imprisonment.

But the children say...

“...they feel ashamed because of the reactions of...us. The body language and the words of teachers, coaches, social workers, pastors and mentors, feels judgmental. When we train mentors and youth group leaders and camp counselors not to mention the parent unless the child brings it up, we must also train them to first let the child know that they know about the situation and are comfortable if the child ever wants to talk. Such training also needs to include practice in listening for how children “bring it up without bringing it up” as well as practice in how to respond effectively. The child who sees a red truck and says that’s a cool truck, it’s like the one my Dad had” is “bringing it up” and needs to know that it is ok with us to talk about Dad.”
“When people ask about my father, I know that if I tell them he is in prison for drugs, they will either drop me in the conversation and talk about the weather or give me this big lecture about how I don’t have to turn out like him. I hate it both ways, so I lie and say he died.”

- P., age 13
ASSESSING FOR ADDITIONAL TRAUMA OF PARENTAL INCARCERATION

Witnessing the arrest of a parent intensifies the child’s loss and creates additional trauma.

EMBEDDED ISSUES

Two-thirds of the incarcerated parent population is non white

- Over 70% of minor children with a parent in prison are children of color
- 1 in 28 children has parent in prison (3.6 % of children)
  - Black children (1 in 9)
  - Hispanic children (1 in 28)
  - White children (1 in 57)

THE ROLE OF SCHOOLS

How can teachers, counselors, coaches and other school staff respond to the needs of children of the incarcerated?
RESIST THE TEMPTATION TO SEE PARENTAL INCARCERATION AS THE SAME AS OTHER LOSSES

➢ People want to know...why is this different than other losses and vulnerabilities?

➢ Parental incarceration is distinguished from other adverse childhood experiences by the unique combination of trauma, shame, and stigma in the absence of relevant support.
“Risk factors are not predictive factors because of protective factors.”

- David Satcher, M.D., Former U.S. Surgeon General
RECOGNIZING PROTECTIVE FACTORS

- Primary attachments
- Other adult bonds
- Skills-confidence
- Emotional competence
- Faith, hope, ability to find meaning
CAREGIVERS AS PROTECTIVE FACTORS BUT...

- Financial hardship
- Shame, stigma and isolation
- Elevated levels of emotional stress
- Additional strains placed on interpersonal relationships
- Increased difficulty in monitoring and supervising children.
- Difficulty deciding what information should be shared with the child
- Lack of information and resources

This was true for all types of caregivers.

Not having access to an available parent causes a feeling of intense stress, fear of abandonment and helplessness in children which causes further trauma.

Milot et al. 2010.
WHAT MEANING DO YOU MAKE?

“56% of children responded negatively and 44% responded positively after the visit, based on caregiver reports...”

“In a study offering hypothetical children in various life circumstances...Teachers rated children of incarcerated mothers as less competent academically and socially and more difficult behaviorally than their peers with mothers who were ‘away’ for other reasons.”

Dallaire, Ciccone and Wilson 2010.
WHAT YOU CAN DO

- **Know** yourself
- **Refer** respect fully and apply *Trauma Informed Practice*
- Use **Universal** outreach
- **Display** materials that can help
- Include **books** in the general libraries and the topic in your **curriculum**
- Help children **talk** about it but **maintain confidentiality**
- Form **support** groups
- **Involve** the incarcerated parent
- **Promote** awareness and reflect on **policies**
- **Find and partner with local programs**
Encourage the use of accurate and helpful statistics in portraying the needs of children and families of the incarcerated.

See Jim Conway’s article from Central Connecticut State University:

Include children of the incarcerated, their caregivers, incarcerated parents and formerly incarcerated parents in defining the problems and designing the solutions. They should have a place at every meeting or table where their needs and concerns are discussed and planned for. They are the experts!

➢ “Families of the incarcerated are included as the warm up act, the anecdotes and the sad stories instead of as the experts.” Liz Gaynes, FCN Report 33, 2003

➢ http://echoesofincarceration.org/Home.html
“Don’t let what you can’t do interfere with what you can do.”

- John Wooden
DAVID OSHER
VICE PRESIDENT & INSTITUTE FELLOW
AMERICAN INSTITUTES FOR RESEARCH
Bottom Line I

- Build assets and protective factors
- Reduce or eliminate risk factors
- Build staff, school, and system proficiency and capacity to serve children of incarcerated parents and other vulnerable children
Employ universal trauma sensitive approaches within a multi-tiered system of support

Build strong conditions for learning for all students

Employ approaches to learning and development that are:
  - strengths based
  - child centered
  - youth and family driven
  - culturally competent
SCHOOLS ARE KEY TO WELLBEING

When they provide:

- Safety
- Preparedness and a realistic sense of competence
  - Skills
  - Competencies
  - Dispositions
  - Experiences
- Connectedness (Blum et al., 2002; Catalano et al., 2004)
- Engagement (Connell et al., 1995; National Research Council, 2003)
- A healthy and health-supporting environment
SUPPORTING CONDITIONS FOR LEARNING

- Connection
- Attachment
- Trust
- Care
- Respect

- Social Emotional Learning & Support

- Positive Behavioral Approaches & Supports

- Learning Supports
  - Effective Pedagogy
  - Engagement
  - Motivation
SCHOOL AS A PROTECTIVE FACTOR AND AS A CONTEXT THAT SUPPORTS RESILIENCE

- Connection
- Academic Success
- Supported Transitions
- Positive Relationships with Adults and Peers
- Caring Interactions
- Social Emotional Learning
- Stability
- Positive Approaches to Disciplinary Infractions
- Services and Supports

SCHOOL AS A RISK FACTOR

- Alienation
- Academic Frustration
- Chaotic Transitions
- Negative Relationships With Adults and Peers
- Teasing, Bullying, Gangs
- Poor Adult Role Modeling
- Segregation with Antisocial Peers
- School-driven Mobility
- Harsh Discipline, Suspension, Expulsion, Push Out/Drop Out

STUDENTS WHO ARE AT RISK ARE PARTICULARLY SUSCEPTIBLE TO:

- Low Teacher Efficacy
- Low Teacher Support
- Negative Peer Relationships
- Chaotic Environments
- Poor Instructional and Behavioral Practices
MULTI-TIERED APPROACHES BUILD ON A STRONG UNIVERSAL FOUNDATION

Provide Individualized Intensive Supports
Provide coordinated, intensive, sustained, culturally competent, individualized, child- and family-driven and focused services and supports that address needs while building assets.

Intervene Early & Provide Focused Youth Development Activities
Implement strategies and provide supports that address risk factors and build protective factors for students at risk for severe academic or behavioral difficulties.

Build a Schoolwide Foundation
Universal prevention and youth development approaches, caring school climate, positive and proactive approach to discipline, personalized instruction, cultural competence, and strong family involvement.
UNIVERSAL INTERVENTION FOR VULNERABLE CHILDREN AND YOUTH

- Cannot Identify All Who Are At Risk
- Children Affect Each Other
- No Stigma
- No Self-fulfilling Prophecies
- No Homogenous Grouping
- Per Child Cost Is Less
- Provides A Foundation
WHY WILL STAKEHOLDERS SUPPORT UNIVERSAL APPROACHES

- Cost effective and beneficial
- Many groups of vulnerable children
- Schools cannot identify all students who are at need or who have experienced trauma
- Parental incarceration effects outcomes for children whose parents are not incarcerated
EXAMPLES

- Trauma Sensitive Schools (Massachusetts Advocates for Children)
- Compassionate Schools (Washington State)
DWIGHT DAVIS
ASSISTANT PRINCIPAL
WHEATLEY EDUCATION CAMPUS
WASHINGTON, D.C.
**PREFRONTAL CORTEX**
- Executive function
- Self-regulation
- Attention

**HIPPOCAMPUS**
- Learning
- Memory

**AMYGDALA**
- Emotional regulation
- Reactivity
KEYS TO SUCCESS

1. Get to know who your students are and **MAKE A PLAN** for them

2. Invest in the **MENTAL HEALTH TEAM** at your school

3. **TRUST IS THE ANTIDOTE TO STRESS:** Just as stress produces cortisol, trust produces hormones such as serotonin, dopamine and oxytocin that lower cortisol and heal the brain

4. Build a **SAFE, SUPPORTIVE CLASSROOM COMMUNITY** that encourages strong relationships between teachers and students and between the students themselves

5. Develop an **INNOVATIVE, RIGOROUS, RELEVANT CURRICULUM**, including structures that help get children engaged in what they are learning
